

TARPAULIN ECO

Meuwissen Gerritsen's tarpaulins are used to cover temporary open structures. The base of woven HDPE provides extreme tear and tensile strength. The polyethylene coating on both sides make the product completely waterproof. The MG Tarpaulin Eco is lightweight and comes in an orange color.

Application

The temporary covering of an open structure or the covering of building parts on the construction site are common applications, but in addition, all objects that need to be protected from weather influences can be easily and permanently protected with MG tarpaulins.

MG tarpaulins are fitted with steel eyelets every other meter so that waterproof fixing can be done without tearing or perforation. The polyethylene base is 100% recyclable.

Benefits

- ✓ Lightweight
- ✓ Available in different sizes
- ✓ Recyclable
- ✓ High tear resistance
- ✓ Extremely strong
